# Public Notice Energy and Environment Cabinet Leonard K. Peters, Secretary

The Energy and Environment Cabinet is seeking public comment until Jan. 22, 2011, on a draft TMDL revision addressing bacteria impairment in one stream segment within the Crooked Creek watershed located in the Upper Cumberland River Basin in Rockcastle County.

The Clean Water Act requires each state to periodically identify specific waters where designated uses are not being met and water quality impairments exist. The state is also required to prioritize the list of impaired waters, calculate a Total Maximum Daily Load (TMDL) of pollutants for those waters and devise plans to improve the water quality. ATMDL is a calculated amount of pollutants a particular water body may contain and remain unimpaired for its designated use.

The Kentucky Division of Water (DOW) is seeking comment on a new bacteria impairment found within the Crooked Creek watershed during TMDL devel-The report, opment. "Crooked Creek E. coli TMDL Revision," prepared by DOW, addresses bacteria impairment in an unnamed tributary to Crooked Creek at levels that no longer support the swimming designated use. The report includes data and procedures used to calculate the TMDL for the stream segment.

Revisions to the report may be made following the public comment period and before it is sent to the U.S. Environmental Protection Agency for approval.
